Flagstones + Paving + Kerbs + Steps

MAINTENANCE

Jointing material may be lost during the early life of dirt. We also advise a more substantial clean equipment. Using a bristle brush with mild detergent of the pavement in both dry and wet weather, being out regularly.

General Wear

Jointing material may be lost during the early life of the pavement in both dry and wet weather, being blown away in dry conditions or washed away from the surface during heavy rain. It is therefore important to inspect areas of new paving regularly in their early life and keep up joints where needed.

Maintenance of Joints

Jointing material may be lost during the early life of the pavement in both dry and wet weather, being blown away in dry conditions or washed away from the surface during heavy rain. It is therefore important to inspect areas of new paving regularly in their early life and keep up joints where needed.

General Wear

Jointing material may be lost during the early life of the pavement in both dry and wet weather, being blown away in dry conditions or washed away from the surface during heavy rain.
